

COVELL CREATIVE METALWORKING DVD's

The DVDs are in NTSC (US) FORMAT

ADVANCED TIG WELDING DVD (NTSC FORMAT) This programme covers many advanced topics in TIG welding, including welding chrome moly steel, stainless steel, aluminium, magnesium, bronze, copper, and titanium.

You'll also learn how to weld castings made from aluminium, magnesium, and bronze. Clear guidelines are given for using the pulse and waveform adjustments that many new welders have, along with great practical advice on machine setup, joint preparation, and weld finishing. Ron's clear and detailed instructions are easy to follow, and the striking close-up photography shows you exactly what to look for as you weld! **DVD, NTSC standard, color 111 Mins \$60.00**

BASIC TECHNIQUES FOR STEEL Probably the most comprehensive metalworking video to date. Ron demonstrates the fundamentals of hammer and dolly technique, and shows how to do high level metal work that requires no filler. He starts with a 1932 Morgan in bad condition, and goes through every step of perfectly restoring the body. You'll see great demo's of hole filling patch panels, wired edge repair, rust repair, TIG welding, metal-finishing, and shrinking. This video shows you how top quality metalwork can be done with very simple tools **DVD, NTSC standard, color 80 Mins \$60.00**

CHOPPING AND SECTIONING A radically rework a '56 Studebaker pickup giving it a 4" chop, a 6" section, and pie cutting the hood. Every step is shown with clear detail. See how where to lay out the cuts, different ways to cut the metal, and how to fit the pieces back together to establish flowing contours. There are demo's on the English Wheel, planishing hammer and Pullmax (with shrinking dies) plus TIG welding and plasma cutting. Special attention is paid to getting the gaps uniform. **DVD, NTSC standard, color 100 Mins \$60.00**

ENGLISH WHEEL TECHNIQUES Starting with a clear explanation of the principles that enable the machine to move metal. Ron shows the basic 'tracking' patterns that are used to shape panels of various sizes and configurations. In addition to the common techniques of wheeling, Ron shows some of the lesser-known processes; such as using a rubber top wheel, and doing embossing with the machine. **Whether you're brand new to the English Wheels or an experienced user, you'll find valuable information on this video. DVD, NTSC standard, color 86 Mins \$60.00**

HAMMER FORMING TECHNIQUES Teaches you all about the hammer forming process. Form blocks are easy to make, and they enable you to create parts with the accuracy of diestamped originals. Ten different hammer forming operations are shown, from a simple tank top to a beautiful rolled edge detail on a complicated pontoon fender for a Bugatti. Striking close-up shots bring you close to the action, and all aspects of the hammerforming process are clearly described. **DVD, NTSC standard, color 76 Mins \$60.00** **OUT OF STOCK ABOUT 2 WEEKS**

MIG WELDING BASICS Covers the basic processes used for MIG welding, covering proper machine setup, joint preparation, electrode selection & preparation, torch technique, and perhaps most importantly, what to check for when things go wrong! Ron's thoughtful description, coupled with close-up photography makes the seemingly difficult process of MIG welding easy to understand. **DVD, NTSC standard, color 80 Mins \$60.00**

SHAPING ALUMINUM WITH HAND TOOLS Watch Ron go through every step of making a track roadster nose, demonstrating techniques suitable for making virtually any body panel. He starts with a station buck defining the shape, shows how the patterns are made, then shows each piece and joins them together. Annealing, mallet and sandbag rough shaping, hammer and dolly smoothing, metal finishing, and both oxy-acetylene and TIG welding are covered. **If you've never seen metal shaped by hand, you may be astounded by how simple the process is! DVD, NTSC standard, color 100 Mins \$60.00**

SLICING AND DICING DVD (NTSC FORMAT) Modifying Grille Shells by Ron Covell

Watch Ron Covell make traditional modifications on two different grille shells; he chops a 1932 Ford shell 2 1/2-inches, and narrows a 1929 shell 5-inches. Ron shows how

being creative with the layout of the cuts can ease your work tremendously, and he shows how to make each cut with precision. You'll learn the importance of proper joint preparation, and you'll see in-depth treatment of tack welding, finish welding, hammer and dolly work, and the final steps needed to smooth the welds to perfection. These same techniques will apply to many other metalworking projects, and Ron's clear and detailed descriptions are easy to follow. The tight close-up photography shows each step in striking detail, and Ron imparts a wealth of knowledge about the 'fine points' of doing top-quality metalworking DVD NTSC Playing Time 34 minutes

TIG WELDING BASICS

Covers the basic processes used for TIG welding, covering proper machine setup, joint preparation, electrode selection & preparation, torch technique, and perhaps

most importantly, what to check for when things go wrong! Ron's thoughtful description, coupled with close-up photography makes the seemingly difficult process of TIG welding easy to understand. **DVD, NTSC standard, color 80 Mins \$60.00**

WORKING WITH TUBING Great close-up shots which bring you close to the action. Several bending techniques are shown, including bending with heat, both freehand and over forms, and using tube bending machines (both inexpensive and professional). Coped and mitered joints are covered, and some techniques are shown for flaring and tapering tubing. There is an extensive section on working with U-bends, showing how to create anything from simple waterpipes to elaborate headers. **Most of the techniques shown use only simple shop equipment You'll love it DVD, NTSC standard, color 80 Mins \$60.00**

BUILDING A CHOPPER CHASSIS Starts with an overview of frame design, explaining the concepts of rake, trail, and stretch. The use of chassis jigs, then goes on to show how to bend and fit tubing to create a chopper frame to match any design. Also shows the use of both entry-level and high-end tools for layout, cutting, and bending **DVD, NTSC standard, color 70 Mins \$60.00**

MAKING MOTORCYCLE GAS TANKS

This video shows how to make two very different gas tanks. The first tank is a flat-bottomed chopper style made from steel, and the process for making bucks and patterns is clearly shown. The second tank is a voluptuously curved custom shape, made from aluminium. See how to do the forming with hand tools, or with an English wheel. **DVD, NTSC standard, color 166 Mins \$80.00**
